

# USING GIT

1

1. Copy your team's private id\_rsa key onto your computer  
Linux / Mac OS X

```
copy priv key to ~/.ssh/id_rsa  
chmod 600 ~/.ssh/id_rsa
```

2. Install git

Linux

```
sudo apt-get install git  
sudo yum install git
```

XO 757

```
sudo yum --nogpgcheck -y install git  
(this is just because build 757 is broked)
```

Windows

**msysGit**

[google it]

Mac OS X

google:

clementson git os x

3. Examine your team's git repo  
in your web browser:

<http://dev.laptop.org/git?p=projects/physics01>

4. "Clone" your git repository  
on your own computer and XO

```
git clone git+ssh://physics01@dev.laptop.org/git/projects/physics01  
git repo-config user.name "Physics Jammer"  
git repo-config user.email "phyz@yahoo.com"
```

5. On the XO:

```
# Symlink Physics.activity to your git folder  
cd physics01  
./setup.py dev
```

restart sugar  
ctrl + alt + erase
